(54) PRODUCTION OF TAXANE TYPE DITERPENE

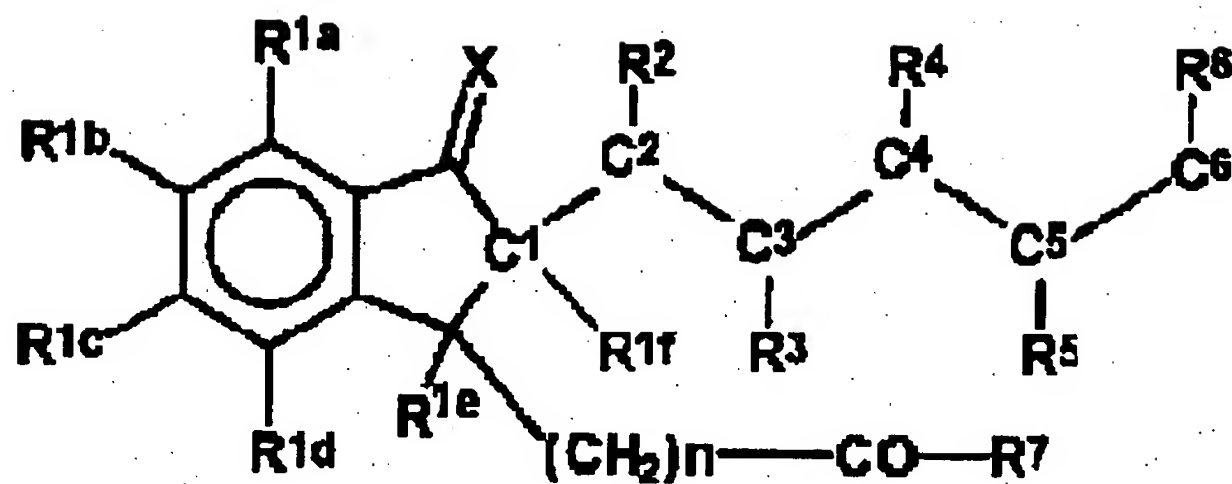

(57) Abstract:

PROBLEM TO BE SOLVED: To profitably obtain a taxane type diterpene useful for medicines for treating ovarian cancer, breast cancer, lung cancer, etc., by culturing the cells and tissues of a plant producing the taxane type diterpene in the presence of a specific compound and subsequently collecting the product from the obtained culture product.

SOLUTION: A method for producing a taxane type diterpene comprises culturing the cells and/or tissues of a plant (e.g. *Taxus media*) producing the taxane type diterpene in the presence of a compound of the formula {R1a to R1b, R2 to R6 are each H, OH, a 1-12C alkyl, a 2-12C alkenyl, a 1-12C alkoxy, a 6-12C aryloxy, a ≤ 12 C (substituted) aryl, etc.; R7 is OH, OM [M is an alkali (alkaline earth) metal, NH₄), NR8a, R8b (R8a, R8b are each H, a 1-12C acyl, a 1-12C alkyl, etc.), OR9 (R9 is a 1-12C alkyl, a ≤ 12 C aryl, etc.); X is O, N-Y (Y is H, OH, etc.), OR11 (R11 is a 1-12C alkyl, a ≤ 12 C aryl, etc.), etc.; n is 1-7), and subsequently recovering the product

from the obtained culture product.
Thus, the objective taxane type
terpene is profitably obtained.
